

Creating an Army of Robotic Party Ponies

Xydexx the Elusive Eccentric

It comes as no surprise that notorious internet celebrity Xydexx Squeakypony, who has the patience of a Saint and the morals of Satan, plans to sequester himself from public scrutiny at his upstate New York research facility to devote his time and effort to working on a new project.

Xydexx, with seemingly boundless enthusiasm for the cute and weird, is preparing to manufacture a fleet of remote-controlled, robotic ponies.

Horse-Powered Victory

Xydexx says robotic ponies are the way of the future. The decision to go with robotic ponies instead of the inflatable variety Xydexx is famous for was the result of changing demographics.

“Nobody really appreciates silly squeaky ponies anymore,” Xydexx explained in a recent interview. He feels robotic ponies are the wave of the future and will ensure what he describes as “horse-powered victory.”

A prototype has already been built and the design team must decide which color schemes will be used. They will be similar in design to the Tekno robotic pony built by Iowa-based Manley Toy Direct. The main difference is that Xydexx’s robotic ponies will be 12 feet tall and built of a titanium alloy. Although a final price has not been decided, Xydexx is trying to ensure they remain affordable at less than \$300,000 each.

The robotic ponies are primarily intended to be novelties for the geek who has everything. They feature a 6 disc CD player and stereo and refrigerated drink dispenser. Xydexx is considering adding a rave lighting kit for those who want the ultimate party pony.

Xydexx refused to comment on whether the ponies could be retrofitted for military purposes.

Breakneck Mountain Facility

Xydexx conducts most of his important research in an underground facility beneath Breakneck Mountain in the Hudson Highland region of New

Xydexx Squeakypony, the squeakiest pony in the universe, is actually an inflatable unicorn.

York. The facility was built in 1994, near the site of an abandoned quarry which operated there in the early 1900s. While the facility is off-limits to the public, the mountain remains a popular hiking destination, part of Hudson Highlands State Park.

Breakneck Mountain is the site of Xydexx’s underground research facility.
